R2

Kasutatakse laialdaselt kosmeetikas, näiteks kreemides ja hambapastas, kuna see aitab nahal niiskust säilitada.

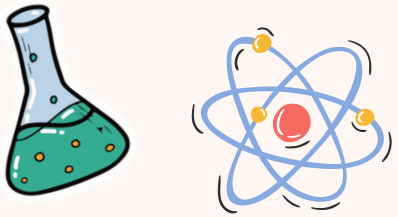

R2

Kasutatakse puhastus- ja desinfitseerimisvahendites. Kasutatakse ka kosmeetika- ja ravimitööstuses.

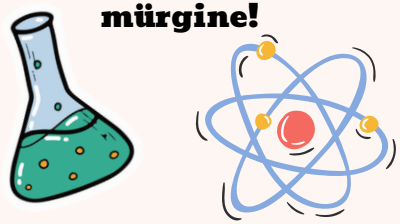

R1

Kasutatakse tänapäeval peamiselt keemiatööstuses ja laboris lahustina. Vanasti kasutati narkoosiks.

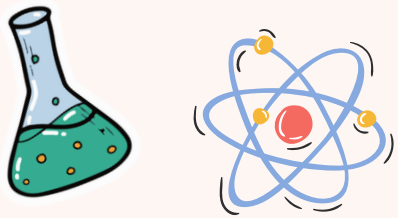

R1

Kasutatakse klaasipesuvedelikes ja keemiatööstuses lahustina. Samuti kasutatakse kütuste ja teiste kemikaalide tootmisel. NB! Väga mürgine!

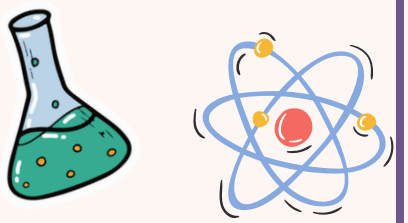

R4

Kasutatakse tugeva lahustina, näiteks liimide ja värvieemaldajate koostises.

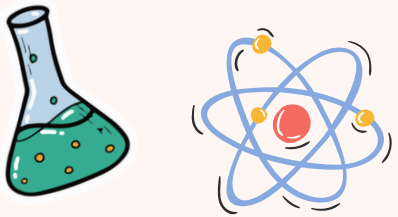

R4

Kasutatakse seepides ja šampoonides, samuti puhastusvahendites ja kosmeetikatoodete valmistamisel.

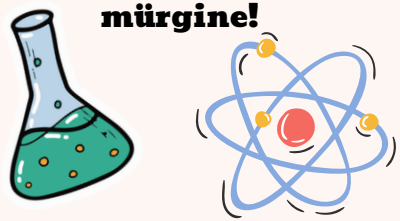

R3

Varem kasutati lahustina ja tulekustutites. Tänapäeval ei kasutata, kuna see on tugevalt mürgine ja ohtlik keskkonnale.

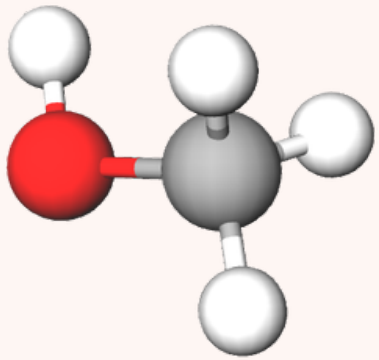

R3

Kasutatakse klaasipesuvedelikes ja keemiatööstuses lahustina. Samuti kasutatakse kütuste ja teiste kemikaalide tootmisel. NB! Väga mürgine!

R6

Kasutatakse peamiselt ravimite, pestitsiidide ja teiste kemikaalide tootmiseks.

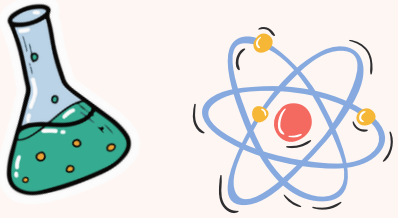

R6

Kasutatakse lahustina värvides, lakkides ja liimides. Kasutatakse ka keemiatööstuses.

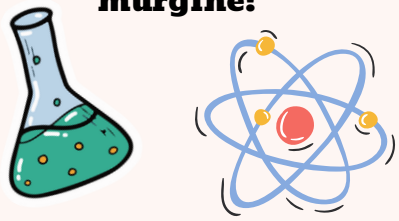

R5

Kasutatakse peamiselt kemikaalide ja ravimite tootmisel. Väikestes kogustes tekib seda toiduainete lagunemisel, sellel on iseloomulik kalalõhn.

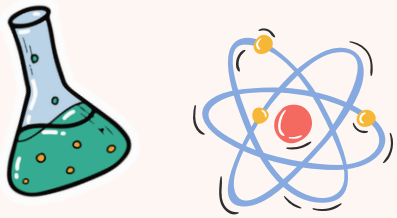

R5

Kasutatakse klaasipesuvedelikes ja keemiatööstuses lahustina. Samuti kasutatakse kütuste ja teiste kemikaalide tootmisel. NB! Väga mürgine!

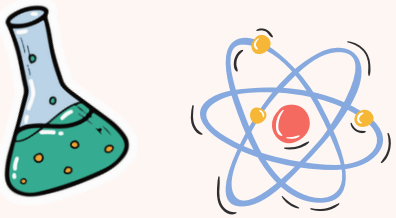

R8

Kasutatakse plasti tootmiseks.

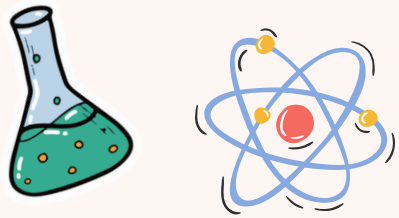

R8

Kasutatakse autode antifriisis ja jahutus-vedelikes. NB! Aine on väga mürgine!

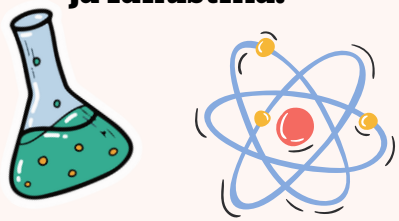

R7

Vanasti kasutati seda lokaalanesteeti-kumina naha ajutiseks tuimestamiseks.

R7

Kasutatakse alkhohoolsetes jookides, desinfitseerimisvahen-dites ja parfüümides. Kasutatakse ka kütuse ja lahustina.
