Agenda of the meeting

- 14th November – getting to know what has been done before the project and during the first months of the project
 - Dinner: restaurant Ribe (<http://www.ribe.ee/>)
- 15th November – planning project activities, summary, communication and dissemination

Project – main goals

- sub-measure: supporting the development of R&D of info and communication technology
- to **find interventions that should be applied** in general schools and higher education institutions to affect positively students' ICT-related attitudes, knowledge, and skills
- to **analyse how effective have been the interventions applied** in the recent 10 years in Estonian schools and are currently applied in the higher education institutions where students study ICT

Outcomes so far ...

- specified issues, dependent and independent factors of our interest
- review of international research
- first data collection – admission of IT students
- second data collection – first year IT students in the beginning of their studies

Issues

- about 40% of IT students drops out during their first study year – we don't know what the main reasons are (or how to predict dropout?)
- there are on average 2.6 candidates competing per available spot at the institutions – can we select them more successfully if we know what to ask (what predicts?)
- we do not know what influences students to apply to study IT (what makes change and what should we do?)

Dependent factors

- continuing studies in ICT (from school to higher education, finishing higher education studies)
- career choices in ICT (before or after HE)
- competency in ICT (knowledge, skills, attitudes)
